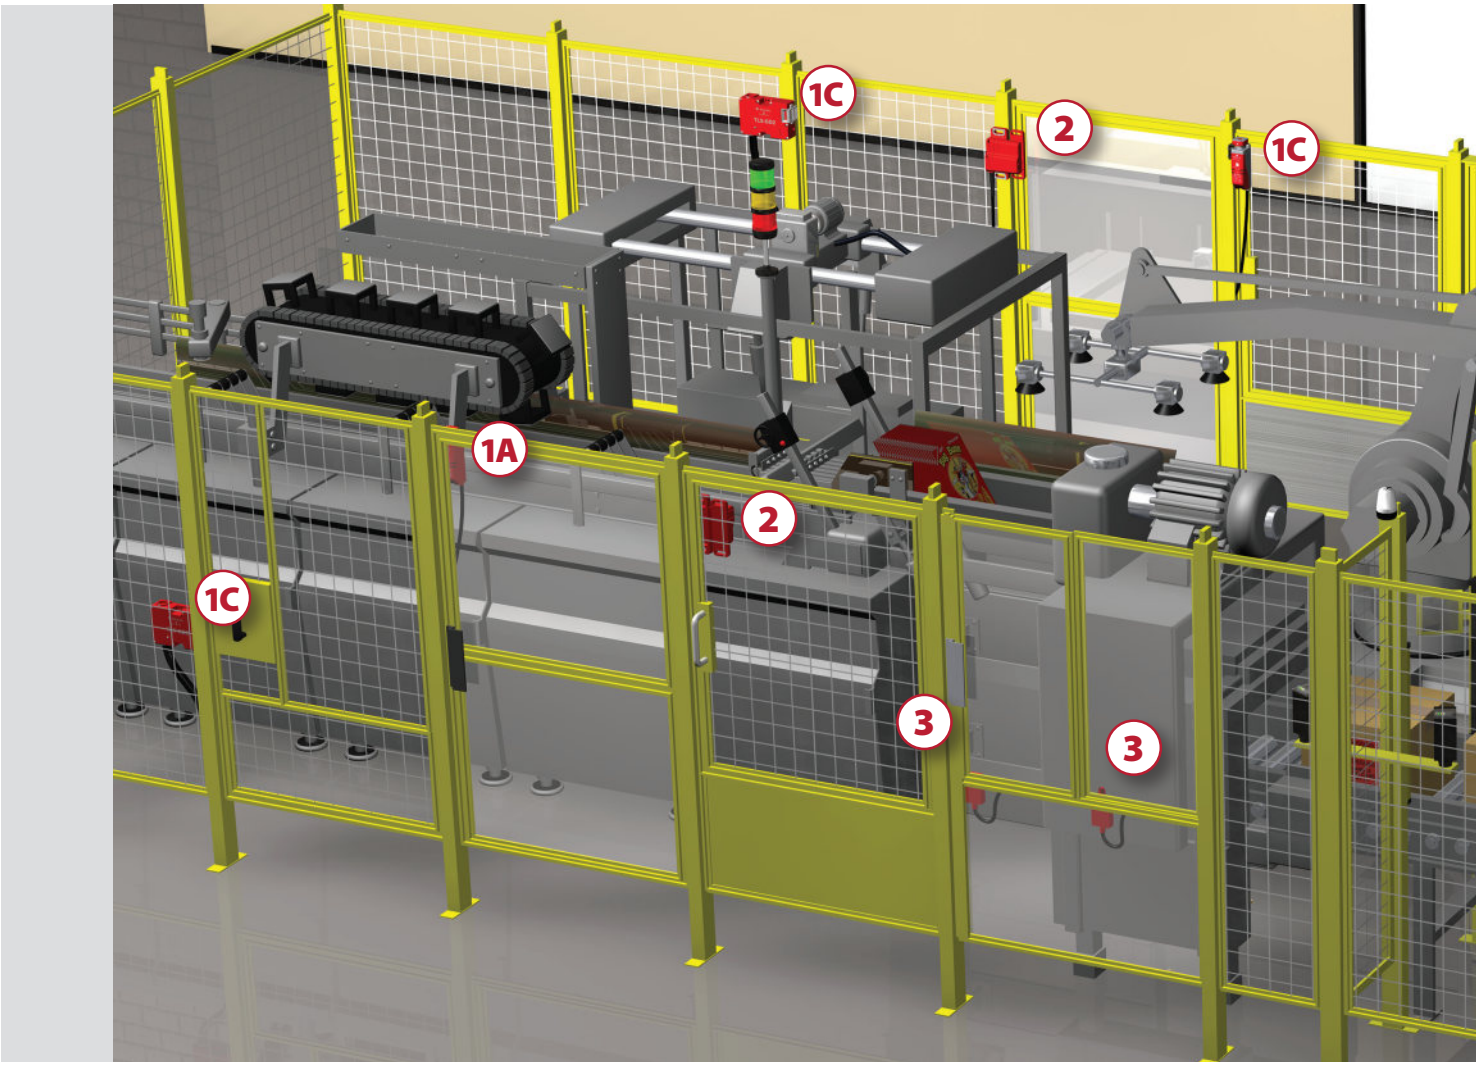
A COMPREHENSIVE FAMILY OF SAFETY SWITCHES

Allen-Bradley® Guardmaster® safety switches from Rockwell Automation® help protect personnel and equipment by providing physical interlocking of guard doors and equipment, allowing access to potentially hazardous areas only when the area is safe.



Note: Representative applications only. Actual solutions may vary.

1 Safety Interlock Switches

Ideal for interlocking sliding, hinge and lift-off guard doors, safety interlock switches offer electrical interlocking of the machine's control circuit to the guard door.
They include:

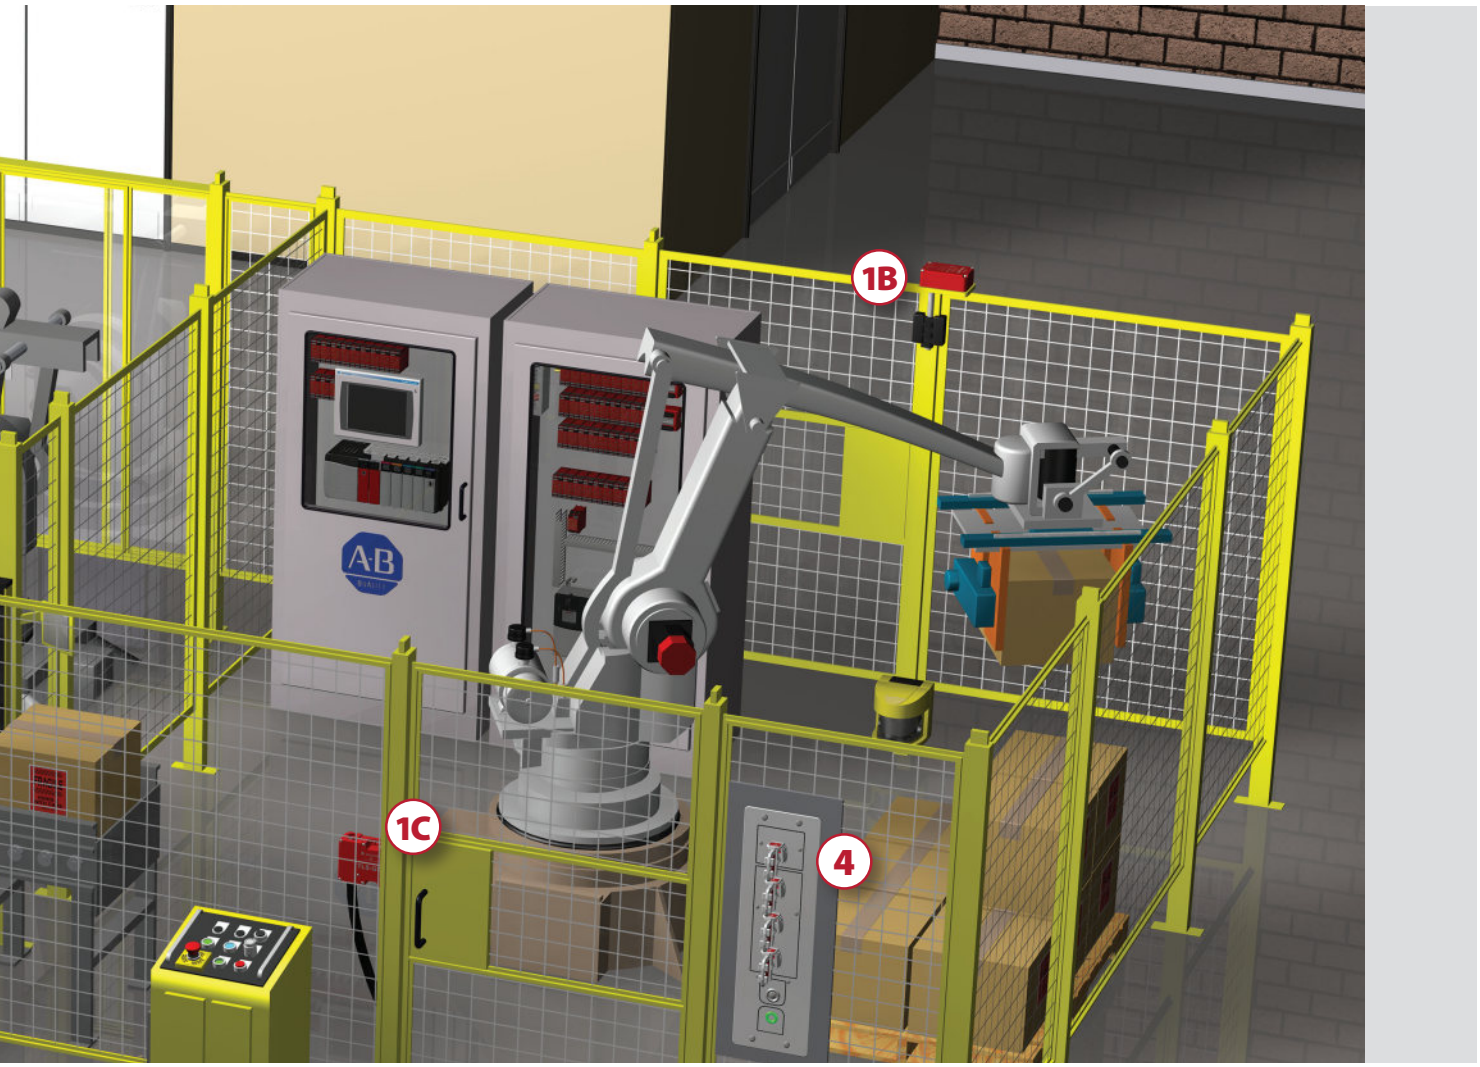
- 1A Tongue operated interlock switches
- 1B Hinge operated interlock switches
- 1C Guard locking interlock switches

2 Non-contact Interlock Switches

Ideal for sliding, hinge, or lift-off machine guard doors , non-contact switches offer simple setup and alignment, less wear, and fully-sealed IP67 and IP69K housings.
They include:

- RFID-coded switches (standard and unique coding)
- Magnetically actuated switches (coded or non-coded)
- Plastic or metal housings

Built to global standards for high reliability, stability and quality, Allen-Bradley Guardmaster safety switches are ideally suited for applications where personnel safety is a priority. Our innovative products help protect your people, machinery and environment while maximizing uptime.

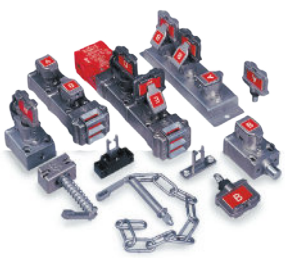


3 Safety Limit Switches

Safety limit switches are designed for position limit control in applications such as sliding guard doors and moving machine beds. They are ideal for applications requiring sensing at either side of a sliding guard door. Available in:

- A variety of actuator and contact configurations
- NEMA or IEC versions
- Plastic or metal housings

4 Prosafe Trapped Key Interlocks



Prosafe trapped key interlock switches are ideal for enforced sequential interlocking and are designed for safety applications requiring a pre-defined sequence of operations.

- Electrical isolators
- Key exchange units
- Interlocks

PRODUCT SPOTLIGHTS

SensaGuard™ RFID Coded Non-Contact Interlocks

Featuring RFID technology for coding, inductive technology for sensing and combining a large sensing range with optimal operation and a generous tolerance to misalignment, SensaGuard switches offer a cost-effective solution that is ideally suited to a wide range of safety applications and is intended for use with all types of guard doors.

- RFID unique (high) or standard (low) coded actuators
- No dedicated controller required
- PLe, Cat 4, SIL 3 rating maintained when connected in series
- Switches can be connected in series with other devices
- Flat pack and barrel (plastic and stainless steel housing)
- Stainless steel versions suitable for use in harsh environments
- Standard, magnetic hold, and integrated latch versions available
- IP69K washdown rating
- 10 to 25 mm assured ON (depending on version)

440G-LZ

The Allen-Bradley Guardmaster 440G-LZ from Rockwell Automation is a guard locking switch designed for partial body access guards. Combining microprocessor technology with an RFID coded actuator, the 440G-LZ features a locking bolt drive mechanism that will only lock when the correct actuator is detected. The locking bolt is continuously monitored for correct insertion within the actuator. This extra functionality allows the 440G-LZ to be certified PLe, Cat 4 , SIL 3 – the highest level of safety for guard position and lock monitoring – and it can be connected directly or in series with other PLe, Cat 4, or SIL 3 rated safety devices.

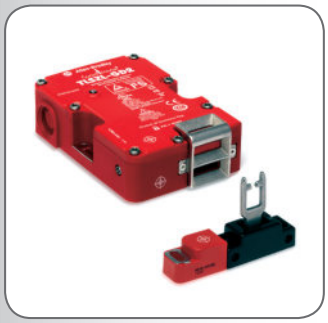
The 440G-LZ runs "cool" and has low power (2.5 W) consumption due to its bi-stable solenoid and built-in energy storage.

The 440G-LZ consumes up to 60% less energy when compared to other guard locking switches, making it a truly 'green' safety solution. It achieves this level of energy efficiency thanks to advanced algorithms and a bi-stable solenoid design that consumes little power for switching, regardless of whether it is in the locked or unlocked state.

TLS-Z Guard Locking Switch

The TLS-Z features an RFID door target that is mounted with the supplied fully-flexible actuator. Using built-in microprocessor technology and two channel OSSD solid-state outputs, these switches operate using a logic-level signal input. The RFID door target is uniquely coded and provides the internal microprocessor with additional door position information. This device can be used in a guard locking system to achieve PLe, Cat 4 and SIL 3.

- RFID unique (high) coded door target
- Power-to-Release (safety of people) and Power-to-Lock (protection of machine production) versions available
- Solid-state OSSD outputs allow the switch to be connected in series with other devices while maintaining safety ratings
- Meets EN/ISO 14119:2013, EN/ISO 13849-1 and EN 62061
- PLe, Cat 4 and SIL 3 for guard position and lock monitoring



440G-LZ Features

- TÜV certified to PLe, Cat 4 per EN/ISO 13849-1, SIL 3 per EN 62061 and EN/ISO 14119:2013
- Uses up to 60% less power than competitive products
- RFID unique (high) or standard (low) coded actuators provide application flexibility
- High holding force (Fzh) per EN/ISO 14119:2013
- Power-to-Release (safety of people) and Power-to-Lock (protection of machine production) versions available
- IP69K washdown rating
- Compact 45 mm housing with four actuator positions for flexibility of mounting

SAFETY SWITCHES AND INTERLOCKS

Tongue Operated Interlock Switches – 440K

Description

- Provide electrical interlocking of a machine's control circuit to the guard door
- Offering flexible keys for enhanced tolerance to misalignment to meet a wide range of applications
- Available in a variety of packages, contact configurations and degrees of holding force
- Easy to install and cost-effective

Safety Limit Switches – 440P

Description

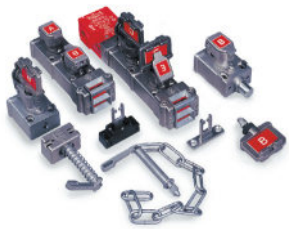
- Available in four different body styles with a broad selection of operator types, circuit arrangements and connection options
- 30 mm metal, 22 mm metal and plastic, and 15 mm plastic body styles
- Wide range of actuator and contact configurations for installation flexibility
- Positive opening-action contacts, making them ideal for safety-related applications

Guard Locking Switches – 440G

Description

- Provide electrical interlocking of a machine's control circuit to the guard door
- Ideal for applications that require a guard door to remain closed and locked until potential hazards have stopped or come to a predetermined safe state
- Help reduce the risk that a guard opens during hazardous machine motion
- Cost-effective solution for protecting machines from interruptions in production

Prosafe Interlocks – 440T



Description

- Ideal for interlocking guard doors, cams and valves
- By using coded Prosafe keys, the system ensures the interlocks cannot be operated or opened while the key is being used in another part of the system
- Unlocking of the interlocks can be carried out only when the correct coded key is inserted

Hinge Operated Interlock Switches – 440H

Description

- Connect directly to a guard door hinge and allow immediate opening of the guard
- Provide good clearance due to convenient, unobtrusive mounting
- Well-suited for machines where product is loaded through a hinged guard
- Ideal for machines with misaligned guards or applications with contaminants that could get caught in a key slot

Prosafe Electrical Isolators – 440T

Description

- Designed to isolate the machine's power and ensure the power remains off while the key is being used in another part of the interlocking system
- Basic rotary switch isolators for immediate power isolation
- Solenoid key release units
- Timed delay isolators offering a pre-determined delay before the key can be removed
- Stopped motion units that don't allow the key to be removed until all monitored hazardous motion has come to a stop or a pre-determined safe state

Non-Contact Interlock Switches – 440N

Description

- Require no physical contact with the actuator, allowing immediate opening of the guard door
- No contact between sensor and actuator helps reduce risk of debris contamination
- Large sensing field helps compensate for door misalignment
- Types: RFID coded (standard & unique) and magnetically coded
- Control units are required for some systems
- Simple setup and alignment, helping to reduce installation costs

Prosafe Key Exchange Units – 440T

Description

- Used in an interlocking sequence to link other devices
- Caters to complex operating sequences
- Primary keys remain trapped until all secondary keys have been re-inserted, rotated, and trapped in the key exchange unit
- Used to trap and release keys in a pre-determined sequence
- Options for multiple keys to be entered or withdrawn
- Can be used as part of a lock-out process
- Solutions do not need power for interlocking
- Up to 25 key sequence

Introduction

Safety switches are used to safeguard hazardous areas. We provide a number of different safety switch configurations. This document describes guard locking, hinge, and interlock switches.

Guard locking switches are used to help protect an area when a danger is not immediately removed after a stop request, as in the case of high-inertia rotating machines, fast rotating machines, and machines where high pressure must be released from pneumatic valves.

Hinge switches, when triggered, close specific normally open (accessible) doors or guards.

Interlock switches monitor the position of a guard or gate. They can be used to shut off power, control personnel access, and help prevent a machine from starting when the guard is open.

440G-MZ Guard Locking Switches

The 440G-MZ guard locking switches have the following features:

- Certified to SIL 3, PLe, Cat 4 for door position monitoring and guard locking
- Embedded GuardLink® technology
- Type 4 interlocking device with guard locking per ISO 14119 with low or high coded RFID actuators
- High holding force of 2500 N
- Flexible actuator
- ±5 mm (0.2 in.) misalignment tolerance
- Energy-efficient bi-stable solenoid
- IP69K
- Power to Release and Power to Lock models
- DEVICE and LINK status is provided by two bright 270° status indicators

440G-LZ Guard Locking Switches

The 440G-LZ guard locking switches have the following features:

- Certified to PLe to ISO 13849-1 (both for door position and lock monitoring to ISO 14119)
- Solid-state design and monitored outputs
- Type 4 interlocking device with guard locking per ISO 14119 with low or high coded RFID actuators
- High holding force of 1300 N
- Energy-efficient green device that only uses 2.5 W
- IP69k and hygienic design
- Power to Release and Power to Lock versions
- Auxiliary output versions: lock status or guard proximity
- Compact design that is optimized for ease of mounting
- Diagnostic information provided by two bright 270° status indicators
- Solid-state OSSD outputs series connectible to ISO 14119

TLS-Z GD2 Guard Locking Switches

The TLS-ZR GD2 and the TLS-ZL GD2 guard locking switches have the following features:

- Meets PLe to ISO 13849-1
- Solid-state OSSD outputs series connectible to ISO 14119
- RFID uniquely coded door target
- Easy QD connection
- Same mechanical arrangement as standard TLS-GD2
- High locking force ≤ 2000 N (450 lbf)

TLS-GD2 Guard Locking Switches

The TLS-GD2 guard locking switches have the following features:

- Power to Release or Power to Lock
- High locking force ≤ 2000 N (450 lbf)
- Five contacts: 2 N.C. and 1 N.O. for door position monitoring 1 N.C. and 1 N.O. or 2 N.C. for lock monitoring
- Rotatable head: Four possible key entry slots
- Conforms to ISO 14119 and IEC 60947-5-1
- Escape release version available
- IP69K, suitable for high pressure, high temperature washdown

WARNING: To monitor independently one or more safety contacts and the solenoid feedback (TLS 1, 2, and 3):
- The 12-wire cordset 889M-F12AH-footnote must be used

and

- For the TLS1 and TLS2, the jumper from 12 to 41 must be removed.
- For the TLS3, the jumpers between 12 and 41 and 22 and 51 must be removed.

WARNING: Monitoring of one or more safety contacts and the solenoid feedback (in series) is available, when jumpers are in place and:
- For the TLS1 and TLS2, by using pins 4 and 6 on the 12-pin, M23 receptacle, or pink and yellow wires on the 12-wire cordset (889M-F12AH-*x* (1)).
- For the TLS3, by using pins 4 and 6 and pins 7 and 8 on the 12-pin, M23 receptacle, or pink and yellow and white and red/blue wires on the 12-wire cordset (889M-F12AH-*x* (1)).

440G-MT Guard Locking Switches

The 440G-MT solenoid switch locks a machine guard closed and can only be opened when a signal is applied to the internal solenoid, which releases the lock mechanism.

The 440G-MT guard locking solenoid switches have the following features:

- Type 2 Interlocking Device with Guard Locking and low coding per ISO 14119
- High Fzh (holding force): 1500 N (337 lb)
- Mechanical lock (Power to Release)
- Heavy-duty, die-cast alloy housing for use in harsh environments
- Diagnostic version available with built-in status indicator to indicate door status independent of lock status

Atlas 5 Guard Locking Switches

The Atlas™ 5 guard locking switches have the following features:

- Type 2 interlocking device with guard locking and low coding per ISO 14119
- High Fzh (holding force): 3850 N (865 lb)
- Mechanical lock (Power to Release)
- Heavy-duty, die-cast alloy housing for use in harsh environments
- Patented self-aligning head tolerates actuator misalignment

440G-S Spartan Guard Locking Switches

The 440G-S Spartan guard locking switches have the following features:

- Type 2 interlock with guard locking and low coding
- Power to Release
- Lid-mounted status indication
- Rotatable head: Four possible key entry slots
- A catch kit with actuator alignment helps protect the unit from actuator damage due to poor guard alignment
- Manual release points with security screws or special key allow the switch to be unlocked if an unforeseen and uncommon circumstance occurs, such as a power failure

Rotacam Heavy-duty Hinge Interlock Switches

The Rotacam™ heavy-duty hinge interlock switches have the following features:

- Can be used as a hinge pin on light- and medium-weight guard doors
- Isolates power within 5° of door movement
- Degree of operation can be customized with adjustable cam
- Robust die-cast case, ideal for heavy-duty applications
- Contacts, 2 N.C. and 1 N.O.

Notes:

440G-EZ Electromagnetic Safety Switches

The 440G-EZ electromagnetic safety switches have the following features:

- Process and machine protection per ISO 14119
- Certified to PLe per ISO 13849-1 (for door position monitoring)
- Non-contact interlocking device with a Power to Lock (PTL) electromagnetic locking function for process protection
- Switches can be connected in series
- Sensor can be mounted in either a surface mount or a flush mount
- Ease of installation and alignment; no tongue interlocks
- Increased efficiency and productivity by minimized downtime
- Reduced long-restart delays
- Status indicators for switch and lock status
- High tolerance to door offset within 5 mm (0.2 in.) in all directions
- Reduced accumulation of scrap

SensaGuard Non-contact Interlock Switches

The SensaGuard™ non-contact interlock switches have the following features:

- Category 4, SIL 3 rated switch, TÜV functional safety approved to IEC 61508
- Switches can be connected to a standard safety relay, for example, the MSR126, MSR127, SmartGuard™, and Safety I/O Blocks
- Multiple actuator sizes for large sensing distance
- IP69K environmental rating
- Short-circuit and overvoltage protection
- Status indicator on the switch for door status and troubleshooting
- Unique coded version
  - Automatic learn process at unit power-up
  - During commissioning, you can select if the sensor can learn a new actuator up to eight times or lock the unit so it cannot learn another actuator
- Integrated latch version
  - Adjustable magnetic force 15...45 N
  - Designed for easy mounting on aluminum profile

The SensaGuard non-contact interlock switches offer the following benefits:

- No dedicated controller required
- Cat 4, SIL 3 rating maintained even with multiple units connected in series
- Switches can be connected in series with other devices (light curtain, E-stops, key interlock switches)
- Extended diagnostics for easy troubleshooting
- Large sensing distances
- Tolerance to misalignment
- Multiple sensing directions
- Stainless-steel version suitable for use in harsh environments
- Use standard proximity brackets

Elf Miniature Tongue Interlock Switches

The Elf™ miniature tongue interlock switches have the following features:

- Ideal for small, lightweight guards
- The smallest interlock switch available
- Contacts, 2 N.C. or 1 N.O. and 1 N.C.
- Eight possible actuator entry points, easy to install
- Environmental protection: IP67
- GD2 style available for difficult applications

MT-GD2 Tongue Interlock Switches

The MT-GD2 tongue interlock switches have the following features:

- Strong and versatile, can be used in most applications
- Eight possible actuator entry points, easy to install
- Variety of contact configurations
- Snap acting MT-GD2 switch gives a minimum break contact force of 40 N
- Optional latch release styles
- Industry standard fixing centers to DIN/EN50041

Notes:

Overview

Trapped key interlock switches can be configured to provide that a predetermined sequence of events takes place or that hazards have been reduced before operators can become exposed to them.

Trapped key interlock switches have the following features:

- Stainless-steel construction
- 90° key operation
- Compact, solid, and sturdy keys supplied with dust seals and coded tagging

Design Suggestions for an Interlocking System

Figure 124 - Plant and Machinery Interlocking

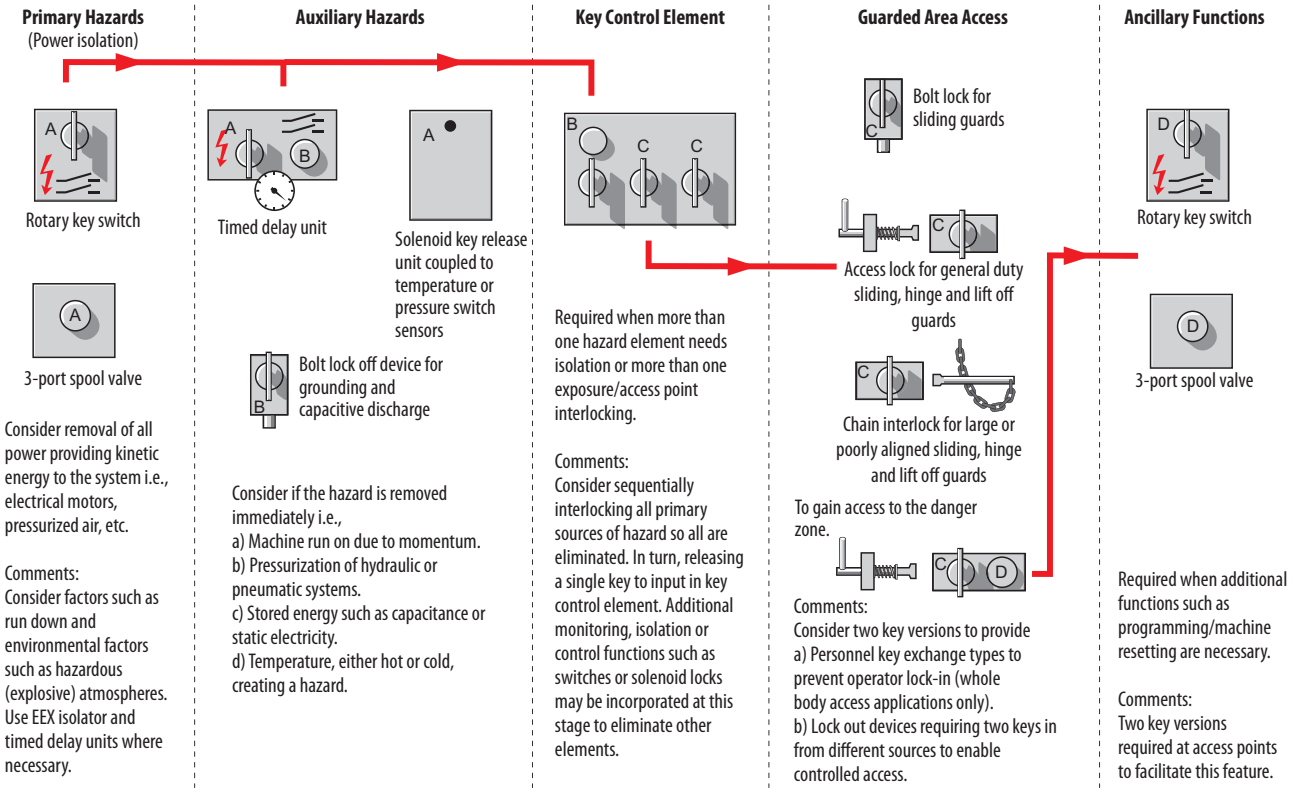

Figure 125 - Illustrated Principals of Trapped Key Interlocking

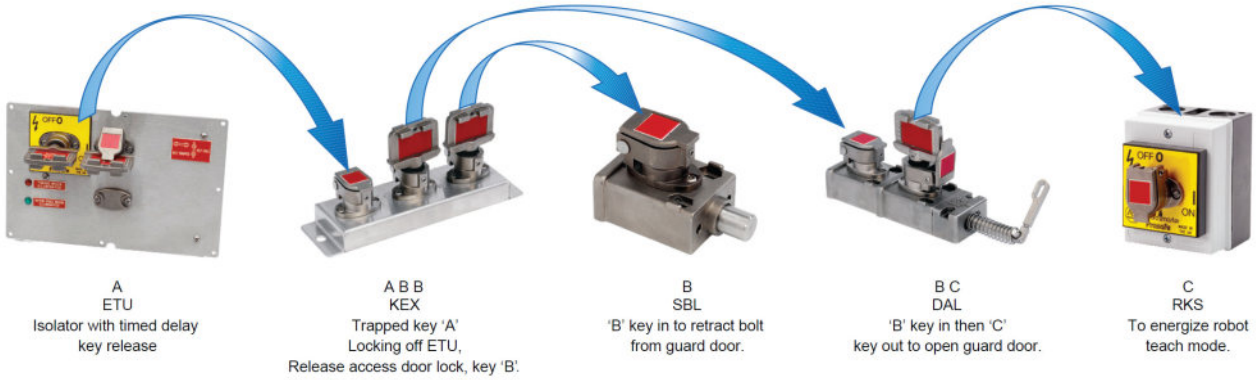

1. The Electronic Timed-delay Unit (ETU) isolator has two keys. One is a nonremovable key. The other key (an A coded key) can be removed after a timed duration, which a potentiometer inside the ETU isolator sets. Turn the nonremovable key to turn off the hazardous machine motion and start the timer. When the time expires, the Key Free light-emitting diode turns ON. Remove the A key.
2. Insert the A key into the Key Exchange Unit (KEX) and turn it 90°.
3. Turn one of the B keys 90° and remove it from the KEX. This action traps the A key in the KEX and helps prevent the restarting of the machine.
4. Insert the B key into the Single-key Bolt Lock (SBL) and turn it 90° to gain partial body access to the machine.
5. Turn the second B key 90° and remove it from the KEX. Removal of this key also traps the A key in the KEX and helps prevent the restarting of the machine.
6. Insert the B key into the Dual-key Access Lock (DAL) and turn it 90°.
7. Turn the C key 90° and remove the C key. To allow full body entry into the hazardous zone, rotate the access handle.
8. Take the C key into the hazardous zone, insert it into the rotary keyswitch (RKSE), and turn it 90° to send a signal to the machine control system that allows the machine to operate in a slow or teach mode.
9. To return the machine to full operational mode, reverse the process.

Primary keys must be ordered separately, when not provided for by a previous sequential trapped key. In the previous example, only one primary key must be ordered separately. The remaining primary keys are provided by a previous sequential secondary (trapped) key.

Code Selection

To order Prosafe® trapped key products, you must include codes in the catalog number.

- The codes are added to the end of the catalog number.
- Each code must be two or three characters in length.
- The first code is the primary code and the last codes, if necessary, are the secondary codes.
- Primary codes are not included. The key must be ordered separately or must come from a previous operation.
- Secondary codes come with the product, as the key is trapped in the code barrel.
- Use Table 71 on page 125 to select and track codes.

Key Coding

Key codes are available in single, double, and triple letters. Available key codes are A...z, Aa...Zz, Aaa...Eac (first letter A...E; second letter a...f; third letter a...z). There are only 25 letters used - Q is not used.

Examples of key codes in a catalog string:
440T-MRPSE110A = key code A
440T-MRPSE11AA = key code Aa
440T-MRPSE113AAA= key code Aaa

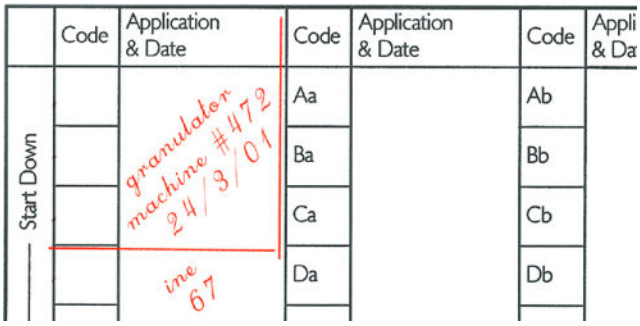

Table 71 is an example reference guide that is useful to select and track codes. Single letter codes are ordered with upper case letters. Labels with two or three letter codes have the first letter upper case and the remaining letters lower case.

Rotary Switches

The rotary trapped key interlock switches have the following features:

- 316L stainless-steel keys
- Direct-drive operation — positively opens contacts
- Stainless-steel dust cap included
- Up to 100 A isolation
- 4 N.O., 2 N.O. and 2 N.C., 3 N.O./1 N.C., 3 N.O., or 3 N.C. and neutral contacts
- Replaceable code barrel assembly

Solenoid Release Units

The trapped key solenoid release units have the following features:

- Direct-drive operation—positively opens contacts
- Integral solenoid monitoring
- Key trapped until release signal is applied
- Green key free status indicator
- 316L stainless-steel construction
- 24V DC, 110V DC, 110V AC, or 230V AC solenoid options
- Weatherproof stainless-steel dust cap as standard
- UL and CSA approval on switches
- Single or multiple key units available (contact your local Allen-Bradley distributor or Rockwell Automation sales office)
- Replaceable code barrel assembly

Specifications

Attribute	Solenoid Release Units

Standards Classification (Safety)	EN ISO 14119 and GS-ET-31, and can be used in safety application up to category 3, PLd in accordance with EN ISO 13849-1, and in the application area of EN 60204-1.
Functional Safety Data	PFHD = 1.00E-7 (probability of dangerous failure per hr); T1 = 20 (Proof test interval)
Certifications	CE Marked for all applicable EU directives, UKCA Marked for all applicable regulations, TÜV Certified rok.auto/certifications
Operating temperature [°C (°F)]	-40...+80 (-40...+176)
Relative humidity	95%
Mechanical life	200,000 operations
Shear force to key, max	15.1 kN (3394.62 lbf)
Torque to key, max [N•m (lb•in)]	14 (10.33)
Material	316L stainless steel

Accessories

Description	Additional Information	Cat. No.
Stainless-steel key	See Accessories on page 166.	440T-AKEYE10x (1)
Stainless-steel replacement code barrel for products other than 100 A RPS/RKS units		440T-ASCBE14x (1)
Stainless-steel weatherproof replacement dust cap		440T-ASFC10x (1)

(1) Substitute the desired primary code for *x* (key not included). See Key Coding on page 124 for code selection.

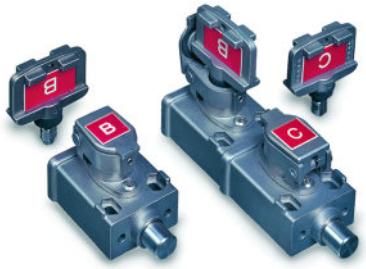
Bolt Interlocks



The trapped key bolt interlock switches have the following features:

- 316L stainless-steel construction
- Single or dual key units
- Various extensions of bolt
- Direct-drive push/pull operation
- Replaceable code barrel assembly
- Fitted with tamper resistant screws
- Weatherproof stainless-steel dust cap as standard

Access and Chains Trapped Key Interlock Switches

The access and chains trapped key interlock switches have the following features:

- 316L stainless-steel construction
- Direct-drive operation
- Fitted with tamper resistant screws
- Lever or chain actuator
- Stainless-steel dust cap as standard
- Replaceable code barrel assembly
- Solenoid and electric versions
- Multiple key options

- Electrical safety contacts combined with trapped key/enforced sequence feature
- Most of the unit is constructed from 316L stainless steel
- Selection of actuator types available
- Single or dual key versions available
- Direct-drive operation
- Replaceable code barrel assembly
- Weatherproof stainless-steel dust cap as standard
- Solenoid versions

Miniature Valve Trapped Key Interlock Switches

The miniature valve trapped key interlock switches have the following features:

- Direct-drive operation
- Supplied with valves 0.25...2 inch
- Direct body mounting with security screws
- Locked open or locked closed options
- Lower maintenance cost
- Weatherproof stainless-steel dust cap as standard
- Replaceable code barrel assembly
- Valve is chrome-plated brass

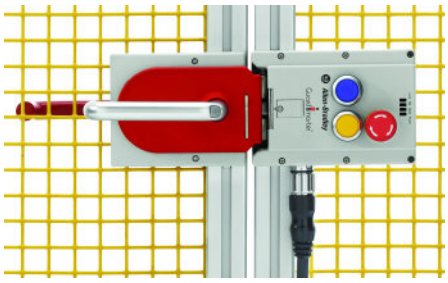
442G Multifunctional Access Box



The multifunctional access boxes have the following features:

- High holding force 2000 N (Fzh per ISO 14119) for a wide range of guarding applications
- Unique RFID coded bolt actuator achieves the highest level of tamper-resistance
- Two models available: Power to Release and Power to Lock
- Available with up to four controls and indicators including an E-stop push button
- Optional escape release allows a person who is locked inside the safeguarded area to exit quickly and easily
- Four status indicators for local status and diagnostics
- Outputs for door position, bolt position, and lock status
- Two integrated hasps included to affix padlocks
- Can be operated as a standalone device or in series with other devices

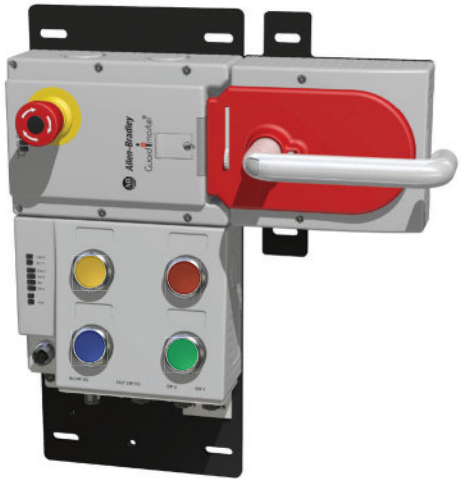
442G Multi-functional Access Box with CIP Safety



The multi-functional access boxes with CIP Safety™ have the following feature:

- EtherNet/IP™ connection saves time and money compared to wiring the standard device
- Easy integration with an Add-on Profile in Studio 5000 Logix Designer® application
- Supports Device Level Ring (DLR) network topologies to help increase network resiliency [(a)]
- Rated PLe, Cat 4 for interlocking, guard lock monitoring and control of guard locking
- Unique RFID coded bolt actuator achieves the highest level of tamper-resistance in accordance with ISO 14119
- High holding force 2000 N (Fzh per ISO 14119) is suitable for a wide range of guarding applications
- Two models available: Power to Release and Power to Lock
- Versions available with an integrated emergency stop push button and connector for attaching an enabling switch
- Integrated push buttons for reset, request to unlock, start/stop
- Four status indicators for local status and diagnostics
- Optional escape release allows a person who is locked inside the safeguarded area to exit quickly and easily
- Two integrated hasps included to affix padlocks

(a) The multi-functional access box currently does not support CIP Sync™, including CIP Motion™ applications. It must not be connected to a DLR network that contains multi-cast I/O devices.
