8200 vector frequency inverter

8200 vector product key

E82 E V 751 K 2 C x x x

Design
E – installation
C – cold plate technology (0.25 ... 22 kW)

Power
e.g. 751 - 0.75 kW
e.g. 752 - 7.5 kW
e.g. 113 - 11 kW

Voltage class
2 – 230/240 V
4 – 400/500 V

Variant
– standard, RFI filter integrated (0.25 ... 11 kW)
1 – IT system
2 – no RFI filter

0 – not coated (0.25 ... 11 kW)
1 – coated (15 ... 90 kW)

302 – with footprint mains filter (15 ... 90 kW)

8200 motec product key

E82   M   V   751   _   4   B   001

Power
e.g. 751 - 0.75 kW
e.g. 752 - 7.5 kW

Voltage class
2 – 230/240 V
4 – 400/500 V

List of abbreviations

B [mm]	Width
C [μF]	Integrated DC-bus capacity
f$_d$ [Hz]	Field frequency
f$_{ch}$ [kHz]	Switching frequency
H [mm]	Height
i	Transmission ratio of the gearbox
I$_{DC}$ [A]	Rated DC-bus current
I$_{max}$ [A]	Maximum output current
I$_N$ [A]	Rated current
I$_{Netz}$ [A]	Rated mains current
I$_{Z\_KN}$ [A]	DC-bus current
I$_{ZK\_max}$ [A]	Maximum output current of supply module
l [m]	Motor cable length
m [kg]	Mass
M$_{eff}$ [Nm]	Effective torque
M$_{max}$ [Nm]	Maximum torque
n$_{max}$	Max. speed
P$_N$ [kW]	Typical motor power
P$_v$ [W]	Power loss
R [Ohm]	Resistance
T [mm]	Depth
U$_{DC}$ [V]	DC input voltage
U$_{Netz}$ [V]	Mains voltage range Rated mains voltage
U$_{ZK}$ [V]	DC-bus voltage
v	Pulse/pause ratio
WK [kWs]	Thermal capacity

About this catalogue

This catalogue contains all frequency inverter components. The corresponding automation components can be found in the PC-based Automation catalogue.

For some components the "arrow" symbol appears together with an identifier printed in bold. This identifier can be retrieved directly in the electronic catalogue. The catalogue can be found online at: www.lenze.de/dsc

Motor filter

Standard geared motors

8200 vector – for standard applications

The concept of the 8200 vector frequency inverter is based on a modular system of components adjusted to each other. If combined with a Lenze geared motor or a Lenze three-phase AC motor, you can produce electronic variable speed drives for a wide range of applications in the 0.25 ... 90 kW power range.

The option of 'bookcase' mounting
permits a space-saving installation in the control cabinet. Installation costs are reduced using integrated filters (optional).

Flexible
The modular structure allows you to optimise the inverters to your application, making cost-effective drive solutions possible while maintaining high performance levels. Regardless of whether you opt for "stand alone" inverters with potentiometer-based setpoint selection or inverters networked in a bus system – the functionality of the inverter can be adapted to your application.

Adaptable
The selectable form of the V/f characteristic allows the frequency inverters to be adapted to loads with torque requirements rising in a constant or quadratic manner. The integrated flying restart circuit means that a drive can be easily restarted when the shaft is still turning.

Energy-saving
The power level is adapted such that the inverter is only driven to suit the current demand for torque/power.

Immediately ready for operation
The frequency inverters are preset for standard use Amongst other things, parameters are set for:
► controlled acceleration and deceleration using set acceleration and deceleration times
► assignment of inputs and outputs with standard functions.

Simple
This series of inverters are characterised by simple operability and handling while also offering high levels of functionality. A clear menu structure and user-guided commissioning thanks to the Global Drive Control easy (GDC easy) parameterisation software makes rapid frequency converter parameter setting and diagnostics possible. GDC easy is free of charge and can be downloaded from www.Lenze.de.

Clear
The XT keypad is also available for operation. Users can quickly access all inverter parameters in the clear menu structure using the 8 keys and a text display. The XT keypad is also used for status display, error diagnosis and, thanks to its integrated memory, for transferring settings to other inverters.

8200 vector – for standard applications

The right setpoint source for every requirement
▶ via setpoint potentiometer to the control terminals
▶ via master voltage or master current to the control terminals
▶ via digital frequency input
▶ via an operator module
▶ via a bus module from a host system

Communication-capable
In communication with a host system, inverters can be incorporated using plug-on bus modules. Virtually all common field bus systems are available (CAN, CANopen, PROFIBUS, INTERBUS, DeviceNet, AS interface and ETHERNET Powerlink).

Reliable
An adjustable slip compensation balances load-related speed variations without costly speed feedback. The maximum current limiting function ensures stable operation under static and dynamic loads. A PTC resistor can be connected to protect the motor.

Used around the world
Thanks to the huge mains voltage range of up to 500 V (+10%), you don't need to worry about where in the world your machine is supplied. And the 8200 vector series is of course certified in line with international standards .

Functions and features

Control modes/motor control	
	V/f control (linear or quadratic)
	Zero-sensor vector control
Basic functions	
	Freely assignable user menu
	4 freely programmable parameter sets (can be swapped over online)
	Fault history buffer
	DC brake function
	Flying restart with coasting motor
	S-ramps for smooth acceleration
	Max. output frequency 650 Hz
	Fixed frequencies
	Masking frequencies
	PID controller
	Freely configurable inputs and outputs
	Level inversion
Monitoring and protective measures	
	Short circuit
	Earth fault
	Overvoltage
	Motor stalling
	Motor phase failure detection
	Load rejection/V-belt monitoring
	I² x t-Motor monitoring
	Motor overtemperature (input for PTC or thermal contact)
Diagnostics	
Status displays	2 LEDs
Braking operation	
Brake chopper	0.25 ... 11 kW integrated; 15 ... 90 kW external
Brake resistance	External

Lenze

Control connections

The 8200 vector receives digital and analogue inputs and outputs through an I/O function module. These are used to control the inverter and/or incorporate it in automation and control concepts.

Communication with a host system can also be established and matched to the application using a plug-in communication module. This ensures great flexibility for various drive and automation tasks (bus and I/O mixed operation).

You can select from two I/O function modules:
► standard I/O PT for standard applications
► application I/O PT for challenging applications.

The function module is integrated on the bottom slot of the 8200 vector. There is a second slot for a bus-function module on the 8200 vector in the 15 to 90 kW power range. This allows the standard I/O PT to be combined with a bus function module; diagnostics with an operating module is for example possible at the same time.

Design	8200 vector with standard I/O PT [1]	8200 vector with application I/O PT [1]
Product key I/O function module	**E82ZAFSC010**	**E82ZAFAC010**
Inputs/outputs		
Analog inputs	► Quantity: 1 ► Voltage or current input (can be switched over) ► Resolution: 10 bits ► Value range: 0 ... +/-10 V, 0/4 ... 20 mA	► Quantity: 2 ► Voltage or current input (can be switched over) ► Resolution: 10 bits ► Value range: 0 ... +/-10 V, 0/4 ... 20 mA

Brake choppers and brake resistors

An external brake resistor is needed to decelerate larger moments of inertia or in the event of longer operations in generator mode. It converts braking energy into heat.
The brake resistors recommended in the table are designed for around 1.5 times the regenerative power for a cycle time of 15/135 s (brake/pause). The brake resistors are fitted with a thermostat (potential-free NC contact).

► The ERBD... brake resistors are tested according to UR

Brake resistance ERBM...(IP20)

Mains chokes

A mains choke is an inductance which is switched in the inverter's mains cable. Using a mains choke delivers the following benefits:

► **less system perturbation:**
the curved shape of the mains current approaches a sine shape.
► **reduction in effective mains current:**
reduction in mains, cable and fuse load.

There are no limitations on using a mains choke together with RFI filters and / or motor filters.

Please note:
► when using a mains choke, the mains voltage on the inverter input is reduced slightly – typical voltage drop on the mains choke at the rated point approx. 5 %.
► A mains choke or mains filter always has to be used for some inverters because otherwise the permissible rated data for the components used may be exceeded as a result of excess mains currents.
► The following assignment applies to operation with rated power.

Motor power	Mains voltage	Product key		Mains choke data

RFI filter

RFI filters are used to observe EMC requirements as stated in European standard EN 61800-3. This lays down EMC requirements for electric drive systems in various categories.
Category C1 applies in public networks (residential areas). In terms of limit values, category C1 corresponds to class B as laid down in EN 55011.
Category C2 applies in industrial premises, but also in residential areas if deemed appropriate by the user. In terms of limit values, category C2 corresponds to class A as laid down in EN 55011.

RFI filter

The 8200 vector with integrated RFI measures satisfies the standard EMC requirements. In the event of more stringent requirements of the noise emission, which cannot be achieved with the RFI measures integrated in the inverter, external filters can be used in the power range of up to 11 kW.

► Important: only use RFI filters in combination with 8200 vector without integrated filters! (E82EV□□□K□C200)
► The motor cable lengths stated are maximum values and depend on the inverter type and switching frequency.

Three different filter types are available:
► LL (Low Leakage) RFI filter with a discharge current < 3.5 mA over 5 m of shielded motor cable allows for installation in portable systems (category C1 with 5 m of shielded motor cable).
► SD (Short Distance) RFI filter with low discharge current, e.g. for operation on a 30 mA earth-leakage circuit-breaker with 10 m of shielded motor cable (guide value) (category C1 with 20 m of shielded motor cable, category C2 with 20 m of shielded motor cable)
► LD (Long Distance) RFI filter for operation with long motor cables (category C1 with 50 m of shielded motor cable, category C2 with 50 m of shielded motor cable).
The LD RFI filter and motor filter combination ensures compliance with category C1 with 100m of shielded motor cable.

Mains filter

A mains filter is a mains choke and RFI filter combination in a housing. It is used to comply with category C1 (with 10m of shielded motor cable) and C2 (with 50m of shielded motor cable) according to EN 61800-3.

► Important: Only use the mains filter in combination with E82EV☐☐☐K4B2☐1 type 8200 vectors! The 8200 vector frequency inverter is also available with a fully fitted mains filter (types: E82EV☐☐☐K4B3☐☐).
► The filters are designed as footprint filters.
► Built-on mains filters are also available (category C1 with 50m of shielded motor cable)
► When mounting the inverter in cold plate technology, only built-on mains filters can be used for interference suppression.
► The motor cable lengths stated are maximum values and depend on the inverter type and switching frequency.
► The following assignment applies to operation with rated power.

Furthermore, a mains filter achieves the efficiency of a mains choke which also reduces the r.m.s. value of the mains current. Mains filters are available in a power range of 15 ... 90 kW.

Motor power	Mains voltage	Product key		Mains filter data		
(asynchronous motor, 4-pole)		Inverter	Mains filter	Rated current	Dimensions	Mass

Motor filter

You use motor filters to reduce the load on the motor winding and to reduce capacitive charge/discharge currents with long motor cables. Motor filters ensure reliable drive operations with up to 100m of shielded or 200m of unshielded motor cable.

► Motor filters combined with a "Long Distance" RFI filter allow category C1 to be observed with a motor cable of up to 100m and category C2 with a motor cable of up to 200m in the 0.25 to 11kW power range.
► The voltage drop on the motor filter with rated current and a frequency of 50Hz is typically around 3% of the max. output voltage of the inverter.
► Observe the operating conditions of the motor filter.

Motor filter

A motor filter is needed:
► as of 50m of shielded or 100m of unshielded motor cable (regardless of observance of EMC requirements)

► When using motors whose insulation systems are not suitable for inverter operation.

Keypad and diagnosis terminal

The keypad is provided to visualise the operating parameters and set parameters for the inverter. The keypad is plugged onto the front of the inverter and is also used for the status display, error diagnosis and, with integrated memory, to transfer parameters to other inverters.

Diagnosis terminal with XT keypad and connection cable

As an alternative, diagnosis terminals with integrated keypads are available for visualising the operating parameters and inverter parameter setting

Design		Features	Slot	Product key
		Keypads and accessories		
Keypad XT		▶ Password protection ▶ Plain text display ▶ Predefined basic configurations ▶ User-specific menus ▶ Suitable for the 8200 vector and 9300 inverters series ▶ IP20 degree of protection		EMZ9371BC
Diagnosis terminal with XT keypad		▶ Diagnosis terminal complete with XT keypad (EMZ9371BC) ▶ Suitable for the 8200 and 9300 inverters series ▶ IP20 degree of protection		E82ZBBXC
Keypad		▶ Password protection ▶ Suitable for installation in control cabinet ▶ Suitable for 8200 inverter series ▶ IP55 degree of protection	AIF	E82ZBC
Diagnosis terminal with keypad		▶ Diagnosis terminal complete with keypad (E82ZBC) ▶ Suitable for 8200 inveter series ▶ IP55 degree of protection		E82ZBB
Assembly kit [2]		▶ Installation kit for control cabinet (for E82ZBC keypad)		E82ZBHT
Connection cable [1]		▶ Connection cable, 2.5 m		E82ZWL025
		▶ Connection cable, 5 m		E82ZWL050
		▶ Connection cable, 10 m		E82ZWL100

[1] Required for use of diagnosis terminal or control cabinet installation kit.
[2] Needed when installing keypad in a control cabinet door.

PC interface (RS232)

Using a PC and the LECOM-A (RS232) communication module, the inverter can be operated and diagnosed (as an alternative to using a keypad) via the convenient and free of charge "Global Drive Control easy" parameter setting / operating software. A PC system cable is used to link to the PC.

PC interface (RS232)

Design		Features	Slot	Product key
LECOM-A communication module		► 3 LED for communication status display ► RS 232 ► Electrically isolated from the bus ► No external voltage supply required	AIF	EMF2102IBCV004
PC system cable		► PC system cable 0.5 m		EWL0048
		► PC system cable 5 m		EWL0020
		► PC system cable 10 m		EWL0021

→ Data sheet on PC interface (RS232)
DS_ZB_EMF_0001
Available for download at www.lenze.de/dsc

PC system bus adapter

Alternatively in a CAN network, operation and diagnostics with the PC can also be undertaken using an inverter CAN interface. The PC system bus adapter is plugged onto the PC's parallel interface or USB connection. The corresponding drivers are installed automatically. Depending on version, the adapter's voltage supply comes via the PC's DIN connection, PS2 connection or USB connection.

EMF2173IBV003 adapter

Advantage:

▶ operation, parameter setting and diagnostics in parallel to plugged keypad
▶ Several inverters can be addressed from one point in networked systems (remote parameterisation)

Design	Features	Product key
PC system bus adapter	▶ Voltage supply via DIN connection on PC	EMF2173IB
	▶ Voltage supply via PS2 connection on PC	EMF2173IBV002
	▶ Voltage supply via PS2 connection on PC ▶ Electrically isolated from the bus	EMF2173IBV003
	▶ Voltage supply via USB connection on PC ▶ Electrically isolated from the bus	EMF2177IB

Setpoint potentiometer

The speed can be selected (setpoint selection or selection of field frequency) using an external potentiometer. The setpoint potentiometer is connected to the analogue input terminals to this end. A scale and rotary knob are also available.

Setpoint potentiometer with scale and rotary knob

Design	Product key
10 kOhm / 1 Watt potentiometer	ERPD0010K0001W
Rotary knob, 36 mm diameter	ERZ0001
Scale 0 ... 100 %, 62 mm diameter	ERZ0002

Plug connector for function modules

The plug connector ensures that the function module makes contact with the inverter. The scope of supply for the inverter includes one plug connector. These plug connectors can be ordered separately later on by way of spares.

Plug connector for function modules

Design	Product key
8 plug connectors for function module	E82ZJ011

DIN rail mounting

Up to 2.2 kW the 8200 vector frequency inverters can be secured on DIN rails (35 x 7.5 or 35 x 15) with a special support. At 1.5 and 2.2 kW, mounting on 2 DIN rails with 2 fastenings is also possible.

Design	Product key
DIN rail mounting 0.25 ... 2.2 kW	E82ZJ002

Brake switch

The brake switch comprises a rectifier and an electronic circuit breaker for switching an electromechanical brake. The brake switch is fitted in the control cabinet using two screws. It is controlled using one of the inverter's digital outputs.

Design	Features	Product key
	Brake switch	
Half-wave rectification	▶ Input voltage: AC 320 ... 550 V ▶ Output voltage: DC 180 V (at AC 400 V), DC 225 V (at AC 500 V) ▶ Max. brake current: DC 0.61 A ▶ Degree of protection: IP00	E82ZWBRE
Bridge rectification	▶ Input voltage: AC 180 ... 317 V ▶ Output voltage: DC 205 V (at AC 230 V) ▶ Max. brake current: DC 0.54 A ▶ Degree of protection: IP00	E82ZWBRB

→ Data sheet on E82ZWBRE brake resistor
DS_Brake_8400_0001
Available for download at www.lenze.de/dsc

→ Data sheet on E82ZWBRB brake switch
DS_Brake_8400_0002
Available for download at www.lenze.de/dsc

Shield connection

Shield connections are available for quick and easy mounting of shielded cables according to EMC. The scope of supply includes a shield sheet and clips. The shield sheets are angled such that the cables can be guided into the cable duct without too great a bend.

Shield connection

Design	Product key
0.25 ... 0.37 kW control cable shield connection	E82ZWEM1
0.55 ... 2.2 kW control cable shield connection	E82ZWEM2
3.0 ... 11 kW control cable shield connection	E82ZWEM3
15 ... 30 kW power connection shield connection; cable diameter 15 ... 28 mm	EZZ0017

PTC kit

When using unshielded PTC cables in the motor cable, the PTC kit must be used. The scope of supply includes a PTC module alongside the shield connection. The PTC module takes the place of a ferrite core installed in the PTC cable. Prepared terminal connections allow the PTC module to be installed quickly and easily.

PTC kit

Design	Product key
PTC kit for 0.25 ... 0.37 kW	E82ZPE1
PTC kit for 0.55 ... 2.2 kW	E82ZPE2
PTC kit for 3.0 ... 11 kW	E82ZPE3

Lenze

Overview of modules

Design	Features	Slot	Product key
Function module			
Standard I/O PT	▶ 5 digital inputs ▶ 1 digital output ▶ 1 analog input ▶ 1 analog output ▶ Pluggable terminal strips		E82ZAFSC010
Application I/O PT	▶ 7 digital inputs ▶ 2 digital outputs ▶ 2 analog inputs ▶ 2 analog outputs ▶ 1 frequency output ▶ Pluggable terminal strips		E82ZAFAC010
AS-i PT	▶ 2 LED for communication status display ▶ 2 freely configurable digital inputs ▶ Pluggable terminal strips	FIF	E82ZAFFC010
CAN PT	▶ Lenze system bus ▶ Pluggable terminal strips		E82ZAFCC010
CAN I/O PT	▶ Lenze system bus ▶ 2 freely configurable digital inputs ▶ DIP switch for selecting baud rate and address ▶ Pluggable terminal strips		E82ZAFCC210
CAN I/O RS PT	▶ Lenze system bus ▶ 2 freely configurable digital inputs ▶ DIP switch for selecting baud rate and address ▶ External supply for module and control electronics of inverter (backup operation in event of mains failure) ▶ Pluggable terminal strips		E82ZAFCC100

Note:
▶ the pluggable terminal strips of the function module ("PT" design) protrude approx. 15mm out of the front of the inverter.
▶ You will find accessories for communication, automation or remote maintenance in the PC-based automation catalogue.

Overview of modules

Standard geared motors

8200 motec – for distributed drive tasks

Lenze frequency inverters are used in a large number of sectors and applications for electronically adjusting the speed of three-phase asynchronous motors. We offer uniform standard products with flexible scope for use, quick and easy commissioning, reliability and of course high quality.

8200 motec is a robust frequency inverter with a high degree of protection for the 0.25 ... 7.5 kW power range which is ideal for distributed drive tasks.

For example it can be fitted near the motor on the machine frame to offer optimum access in any mounting position. The power supply is disconnected from the drive electronics using plug-in contacts. In the event of service all you need do is loosen four screws to replace the heatsink and all electronics. Integrable function modules allow the 8200 motec to be incorporated in the control and automation set-up of your machine or plant with a precise fit.

The 8200 motec is related to the "control cabinet frequency inverter" 8200 vector offering the same function. Operation, diagnostics, functionality and drive behaviour are all the same which offers benefits in combined central/distributed concepts. The device is either operated via the XT keypad operating module or via a PC together with the convenient and free of charge GDCeasy operating software.

Very simple retrofitting
Other than the mains supply, no extra control voltage is needed to operate the 8200 motec, allowing what have previously been uncontrolled systems to be retrofitted at little cost for the purpose of process optimisation.

Adaptable
The selectable form of the V/f characteristic allows the frequency inverters to be adapted to loads with torque requirements rising in a constant or quadratic manner. The integrated flying restart circuit means that a drive can be easily restarted when the shaft is still turning.

Energy-saving
The power level is adapted such that the inverter is only driven to suit the current demand for torque/power.

Immediately ready for operation
The frequency inverters are preset for standard use Amongst other things, parameters are set for:
► controlled acceleration and deceleration using set acceleration and deceleration times
► assignment of inputs and outputs with standard functions

Clear
The XT keypad is also available for operation. Users can quickly access all inverter parameters in the clear menu structure using the 8 keys and a text display. The XT keypad is also used for status display, error diagnosis and, thanks to its integrated memory, for transferring settings to other inverters.
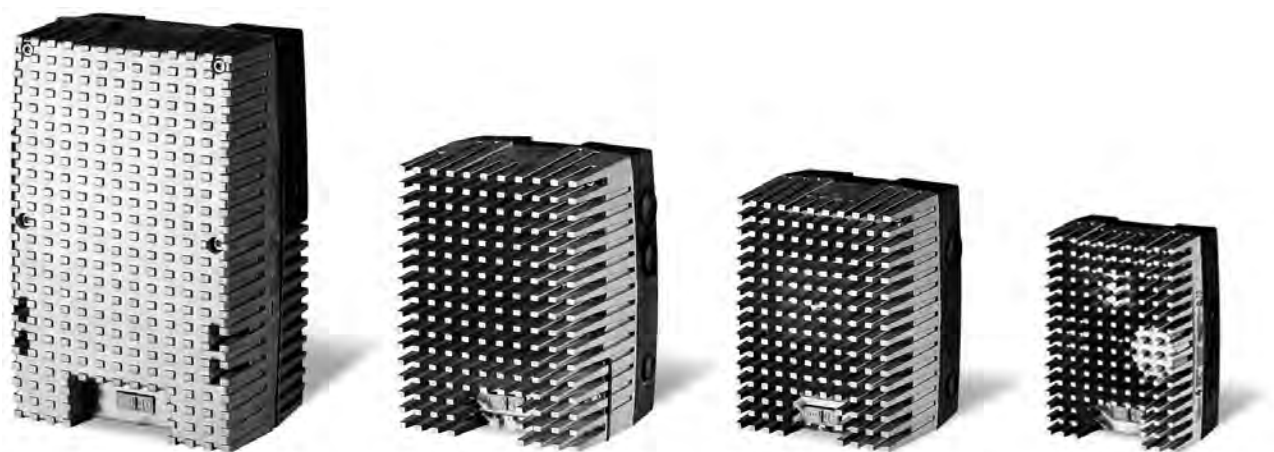

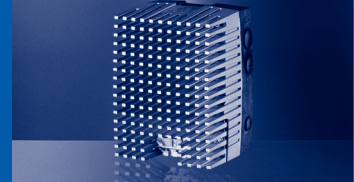

8200 motec – for distributed drive tasks

The right setpoint source for every requirement
▶ via setpoint potentiometer to the control terminals
▶ via master voltage or master current to the control terminals
▶ via digital frequency input
▶ via an operator module
▶ via a bus module from a host system

Reliable
An adjustable slip compensation balances load-related speed variations without costly speed feedback. The maximum current limiting function ensures stable operation in all operating points under static and dynamic loads. A PTC thermistor can be connected to protect the motor.

Communication-capable
In communication with a host system, inverters can be incorporated using plug-on bus modules. Virtually all common field bus systems are available (CAN, CANopen, PROFIBUS, INTERBUS, DeviceNet, AS interface and ETHERNET Powerlink).

Used around the world
Thanks to the huge mains voltage range of up to 500 V (+10%), you don't need to worry about where in the world your machine is supplied. And the 8200 vector series is of course certified in line with international standards.

Functions and features

Control modes/motor control	
	V/f control (linear or quadratic)
	Zero-sensor vector control
Basic functions	
	Freely assignable user menu
	4 freely programmable parameter sets (can be swapped over online)
	Fault history buffer
	DC brake function
	Flying restart with coasting motor
	S-ramps for smooth acceleration
	Max. output frequency 650 Hz
	Fixed frequencies
	Masking frequencies
	PID controller
	Freely configurable inputs and outputs
	Level inversion
Monitoring and protective measures	
	Short circuit
	Earth fault
	Overvoltage
	Motor stalling
	Motor phase failure detection
	Load rejection/V-belt monitoring
	I^2 x t-Motor monitoring
	Motor overtemperature (input for PTC or thermal contact)
Diagnostics	
Status displays	2 LEDs
Braking operation	
Brake chopper	Integrated
Brake resistance	External

Control connections

The 8200 motec receives digital and analogue inputs and outputs through an I/O function module. These are used to control the inverter and/or incorporate it in automation and control concepts.

Communication with a host system can be established and matched to the application using a plug-in communication module as an extra or alternative. This ensures great flexibility for various drive and automation tasks .

You can select from three different I/O modules:
► standard I/O for standard applications
► application I/O for challenging applications
► bus I/O for bus and I/O mixed operation (a bus function module is also needed)

The function modules are integrated in the 8200 motec carrier housing.

Rated data

► The data is valid for operation at 3/N/PE AC 400 V.

► Unless otherwise specified, the data refers to the default setting with a switching frequency of 8 kHz.

► Depending on the application (e.g. with wall mounting), the E82ZMV fan module is needed (see accessories chapter).

→ Other rated data, e.g. for operating with increased rated power

Brake choppers and brake resistors

An external brake resistor is needed to decelerate larger moments of inertia or in the event of longer operations in generator mode. It converts braking energy into heat.
The brake resistors recommended in the table are designed for around 1.5 times the regenerative power for a cycle time of 15/135 s (brake/pause). The brake resistors are fitted with a thermostat (potential-free NC contact).

Brake resistance ERBS... (IP65)

Keypad

The keypad is provided to visualise the operating parameters and set parameters for the inverter. The keypad is plugged onto the front of the inverter and is also used for the status display, error diagnosis and, with integrated memory, to transfer parameters to other inverters.

Diagnosis terminal with keypad and connection cable

Design		Features	Slot	Product key
		Keypads and accessories		
Diagnosis terminal with XT keypad		▶ Diagnosis terminal complete with XT keypad (EMZ9371BC) ▶ Suitable for the 8200 and 9300 inverters series ▶ IP20 degree of protection	AIF	E82ZBBXC
Diagnosis terminal with keypad		▶ Diagnosis terminal complete with keypad (E82ZBC) ▶ Suitable for 8200 inveter series ▶ IP55 degree of protection		E82ZBB
Connection cable		▶ Connection cable, 2.5 m		E82ZWL025
		▶ Connection cable, 5 m		E82ZWL050
		▶ Connection cable, 10 m		E82ZWL100

PC interface (RS232)

Using a PC and the PC interface (RS232), the inverter can be operated and diagnosed (as an alternative to using a keypad) via the convenient and free of charge "Global Drive Control easy" parameter setting/operating software. A PC system cable is used to link to the PC , a connection cable to link to the inverter.

PC interface (RS232) with connection cable and PC system cable

Design		Features	Slot	Product key
Diagnosis terminal with RS 232 interface		▶ RS 232 ▶ 2 LED for communication status display ▶ No external voltage supply required	FIF	E82ZBL-C
PC system cable		▶ PC system cable 0.5 m		EWL0048
		▶ PC system cable 5 m		EWL0020
		▶ PC system cable 10 m		EWL0021

Wiring terminals E82ZWKN4 and E82ZWKN2

Wiring terminals

Wiring terminals allow mains or control cables to be looped through and wired in the carrier housing of the 8200 motec. A "power bus" can be set up in conjunction with the mains bus connectors.

System terminals are perfect for connecting and wiring control cables.

► 3 ... 7.5 kW:
When using standard twin wire end ferrules, mains cables of up to $4mm^2$ can be rounded in the motec carrier housing.

Design	Product key
Mains bus connector 0.25 ... 0.37 kW (max. 16 A)	E82ZWKN2
Mains bus connector 0.55 ... 2.2 kW (max. 24 A)	E82ZWKN4
System terminals (12-pole) 0.55 ... 2.2 kW [1]	E82ZWKS

[1] System terminals cannot be used in combination with bus I/O or brake switch

Current limiting module

A current limiting module reduces the current peak when the 8200 motec(s) is (are) started up on the mains supply. The module is designed for DIN rail mounting.

Current limiting module

Design	Product key
Current limiting module 0.25 ... 2.2 kW (max. 20 A)	E82ZJ004 [2]

[2] At 0.55 ... 2.2 kW: use 3 items

→ Data sheet on current limiting module

Lenze

Brake switch

The brake switch comprises a rectifier and an electronic circuit breaker for switching an electromechanical brake. The brake switch is fitted inside the 8200 motec. It is controlled using a digital output from the standard or application I/O.

▶ In the 0.25 ... 2.2 kW power range the brake switch cannot be used in combination with bus I/O or system terminals.

Brake switch

Design	Features	Product key
	Brake switch	
Half-wave rectification	▶ for 0.55 ... 7.5 kW ▶ Input voltage: AC 320 ... 550 V ▶ Output voltage: DC 180 V (at AC 400 V), DC 225 V (at AC 500 V) ▶ Max. brake current: DC 0.61 A	E82ZWBRE
Bridge rectification	▶ for 0.55 ... 7.5 kW ▶ Input voltage: AC 180 ... 317 V ▶ Output voltage: DC 205 V (at AC 230 V) ▶ Max. brake current: DC 0.54 A	E82ZWBRB
	▶ for 0.25 ... 0.37 kW ▶ E82ZWBRB brake switch incl. terminal cradle ▶ Input voltage: AC 180 ... 264 V ▶ Output voltage: DC 205 V (at AC 230 V) ▶ Max. brake current: DC 0.41 A	E82ZMBRB

Switch/potentiometer unit

The switch/potentiometer unit is fitted on the 8200 motec itself or at another location in the plant. Using the switch/potentiometer unit and an I/O function module (standard I/O, application I/O, bus I/O) an analogue setpoint can be selected for the inverter with the integrated potentiometer; the rotary switch can be used to e.g. start or stop the drive or change the direction of rotation.
The switch/potentiometer unit is supplied with a 2.5 m connecting cable and fixings for mounting on the 8200 motec heatsink.

Switch/potentiometer unit

Design	Product key
Switch/potentiometer unit (IP65)	E82ZBU

▶ Data sheet on switch/potentiometer unit iE82ZBU
DS_ZB_8200m_0001
Available for download at www.lenze.de/dsc

Switch unit

The switch unit is fitted in an M20 cable gland of the 8200 motec. A digital input can be used to e.g. start or stop the drive.

Switch unit

Design	Product key
Switch unit (IP55)	E82ZBS020

Fan module

The fan module is provided for 8200 motec in the power range 3.0 ... 7.5 kW and contains an electronic fan which is powered by the 8200 motec.
The fan module is needed when the
► 8200 motec is wall-mounted
► when using motors or geared motors which were not produced by Lenze.
► when using self-ventilated Lenze motors or geared motors which operate without reducing the rated output current.

Fan module

Design	Product key
Fan module (IP 54)	E82ZMV

Adapter plate

Adapter plates are available for fitting the 8200 motec on motors whose drilling pattern does not match the Lenze standard. The plates should be drilled by the user as required for the motor awaiting adaptation.

Adaptor plate

Design	Product key
Adapter plate 0.25 ... 0.37 kW	EJ0048
Adapter plate 0.55 ... 2.2 kW	EJ0047
Adapter plate 3.0 ... 7.5 kW	EJ0050
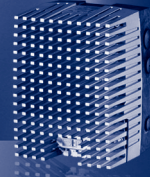

Overview of modules

The inverters have a slot for a module. The slot is inside the motec. Depending on application, it should be equipped with a corresponding module.

An extra bus function module can be used when using the bus I/O. The table below describes the modules available for this slot.

Design		Features	Slot	Product key
Function module				
Standard I/O		▶ 5 digital inputs ▶ 1 digital output ▶ 1 analog input ▶ 1 analog output ▶ Coated design for operation in industrial environments		E82ZAFSC001
Application I/O		▶ 7 digital inputs ▶ 2 digital outputs ▶ 2 analog inputs ▶ 2 analog outputs ▶ 1 frequency output ▶ Coated design for operation in industrial environments		E82ZAFAC001
AS-i		▶ 2 LED for communication status display ▶ 2 freely configurable digital inputs ▶ Coated design for operation in industrial environments		E82ZAFFC001
CAN		▶ Lenze system bus ▶ Coated design for operation in industrial environments	FIF	E82ZAFCC001
CAN I/O		▶ Lenze system bus ▶ 2 freely configurable digital inputs ▶ DIP switch for selecting baud rate and address ▶ Coated design for operation in industrial environments		E82ZAFCC201
CANopen		▶ Communication profile: CANopen DS301, V4.02 ▶ Lenze system bus ▶ 2 LED for communication status display ▶ DIP switch for selecting baud rate and address ▶ Coated design for operation in industrial environments		E82ZAFUC001
DeviceNet		▶ 2 LED for communication status display ▶ DIP switch for selecting baud rate and address ▶ Coated design for operation in industrial environments		E82ZAFVC001

Overview of modules

| Design		Features	Slot	Product key
Function module				
INTERBUS		▶ 2 LED for communication status display ▶ DIP switch for selecting the number of process and parameter data words ▶ Coated design for operation in industrial environments	FIF	E82ZAFIC001
LECOM-B		▶ RS 485 ▶ 2 LED for communication status display ▶ Coated design for operation in industrial environments		E82ZAFLC001
PROFIBUS		▶ Communication profile: PROFIBUS-DP-V0 ▶ 2 LED for communication status display ▶ Bus terminating resistor can be activated using DIP switch ▶ Coated design for operation in industrial environments		E82ZAFPC001
PROFIBUS I/O		▶ Communication profile: PROFIBUS-DP-V0 and -V1 ▶ 2 LED for communication status display ▶ 2 freely configurable digital inputs ▶ Bus terminating resistor can be activated using DIP switch ▶ DIP switch for address selection ▶ Coated design for operation in industrial environments		E82ZAFPC201

Selection and order data

The "Global Drive Control" (GDC) PC program is a clear tool which is easy to understand. It is used for the
operation, parameter setting, configuration and diagnostics of many Lenze drives and automation devices.
Advantages at a glance:

- ► quick and easy drive commissioning via short set-up
- ► intuitive operation even for inexperienced users
- ► extensive Help functions
- ► convenient diagnostics options using various monitor windows and oscilloscope functions make external measuring instruments superfluous
- ► the function blocks can be interconnected without any knowledge of how to program using the function block editor

User interfaces of Global Drive Control

Design	Features	Product key
Global Drive Control "easy", freeware	► Order free of charge ► Download via the Internet ► Includes GD Loader ► Languages: German/English	Download free of charge
GDC starter package	► Includes: - Global Drive Control, single user licence - USB system bus adapter	ESP-GDC-2S
Global Drive Control, single user licence	► CD-ROM included in scope of supply ► Installation on one PC ► Includes GD Loader and GD Oscilloscope ► Languages: German/English	ESP-GDC2
Global Drive Control, multiple user licence	► CD-ROM not included in scope of supply ► Multiple installations on the number of machines for which licences have been purchased ► The basis is a single user licence	ESPMGDC2
Global Drive Control, corporate licence	► CD-ROM not included in scope of supply ► Multiple installations within a company at one location ► The basis is a single user licence	ESPFGDC2
Global Drive Control, buyout licence	► CD-ROM not included in scope of supply ► Multiple installations within a company at one location ► Issuing of sublicences in conjunction with Lenze drives installed in a machine ► The basis is a single user licence	ESPBGDC2

Functions and features

The following table describes functions and features of the engineering software.

Since not all functions can be accessed by every drive, the engineering software appears differently, depending on the selected drive.

Data access/communication

The following table describes the communication paths of the engineering software to the connected drives.
Some drives do not support all communication paths, so that some communication paths may not be possible.

Product key Short form		ESP☐GDC2
Design		
	GDC easy	**GDC**
Version Latest software version	V4.10	
Communication System bus (CAN)	▶ USB connection with USB system bus adapter EMF 2177IB [1] ▶ Parallel interface with system bus adapter EMF 2173IB	
LECOM	▶ RS485 with interface converter (LECOM B) [2] ▶ Optical fibre via RS232 converter of PC (LECOM LI) ▶ RS232 (LECOM A)	
OPC Drive Server	▶ Via all connections defined on the OPC Drive Server (bus server)	

[1] Not valid for Windows NT®. This operating system does not support the USB port.
[2] Possible using one of the intelligent interface converters freely available on the market (not supplied by Lenze).

System requirements

To be able to use Global Drive Control, the following minimum hardware and software requirements must be met:
▶ Microsoft®Windows® 98/Me, Windows NT® 4.0 SP5 or higher or Windows 2000 SP2/XP or higher
▶ IBM compatible PC with Intel® Pentium® processor 333 MHz or higher
▶ At least 128 MB RAM
▶ At least 250 MB free hard disk space
▶ At least 1024 x 768 pixels screen resolution with 256 colours
▶ Mouse
▶ CD-ROM drive
▶ Internet Explorer Version 5 or higher
▶ Free slots/interfaces in accordance with the requirements of the individual fieldbus interface modules
